D'ECOLINGI

Natural Cosca wallpaper is a unique and green hand-made product. The underlying concept when using this high-quality wall covering is to create a harmonious and comfortable environment.

NATURAL WALLPAPER – is wall covering that is composed of plant fibre glued onto a paper or fabric base

- DECORATIONS:
 - jute
 - bamboo
 - sisal
 - cane
 - flax
 - arrowroot
 - papyrus strands
 - China grass
 - golden daisies
 - mace reeds
 - leaves
 - mica

- BASES:
 - unbleached paper, fabric

COSCA WALLPAPER FEATURES

- ✓ **Various combinations of collections and patterns**
- ✓ **Safe for children**
- ✓ **Excellent soundproofing**
- ✓ **Environmentally-friendly**

Cosca plant life

Jute is a sort of shrub, sub-shrub and a mallow herb, as well as a fibre crop. Jute fabric is environmentally-friendly, and is resistant to solar radiation and to temperature differences. Besides this, jute fibre doesn't accumulate static electricity.

Bamboo is a large member of the Poaceae subfamily. It stands out from other crops for its strong lignified caulis-retaining jointed structure that is typical for bamboo crops. Some species reach 40 m in length.

Sisal or agave sisalana. Sisal fibre is extremely durable when compared to a wide range of vegetative fibres. Therefore, sisal is actively applied in many types of textile production.

Cane. The plant stems are very strong and do not easily break. Cane stands also have an important environmental function: they grow in boggy and marshy areas, and in time, will help in drying such areas.

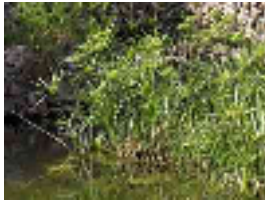

Flax. The Flax family accounts for about 230 species of annual and perennial plants that occur in moderate subtropical locations. Due to its useful properties, flax is widely applied in traditional medicine and in commercial production.

Arrowroot leaves are able to change their growth direction, depending on the ambient environment. In favourable conditions, their lamina pattern is almost horizontal. However, if the light is insufficient, or other unfavourable factors exist, the leaves will grow upwards or fold up. Owing to this peculiarity, arrowroot is known as the prayer plant.

Cosca plant life

	<p>Papyrus. A perennial herbaceous plant of sedge family. The Egyptians used this plant for different purposes, but mainly for papermaking. At present, papyrus has almost disappeared from its natural habitat, but is cultivated mainly for decorative purposes.</p>		<p>China grass. This herb originates from East Asia. The fibre of the nettle is quite strong, and is practically not affected by rotting. Therefore, China grass can be used for the production of ropes. Its fibres are also used for making extravagant paper and fabrics.</p>		<p>Golden daisy. A perennial herbaceous plant that is able to reach 80 cm in height, and includes about 230 species. The flowers come out during the whole of the spring, and the seed heads appear from late spring until early summer. In its natural habitat, this plant can be found in open terrains, as well as at the edges of forests.</p>
<p>Mica is a mineral with a laminated structure. Besides its other wonderful properties, it features high thermal and soundproofing characteristics (therefore, it can be used in constructions) and an incredible absorbing capacity: vermiculite can absorb an amount of moisture that exceeds its own weight by five-fold.</p>		<p>Mace reeds. Tall marshy herbs that occur in moderate and tropical countries. The flowering stem sprouts are gathered in May, while the leaves and flowers are gathered in June. To retain their colour and elasticity, the leaves are dried in the shade. The plant can be used for paper production, while the leaves and roots are used for medical purposes.</p>
